Computer Science undergraduate at Indian Institute of Information Technology Kota with a strong interest in software development and problem-solving. Focused on building scalable applications and creating clean, efficient, and maintainable code.

Education

Indian Institute of Information Technology, Kota

Aug 2023 – May 2027

B.Tech in Computer Science and Engineering

Kota, Rajasthan

Technical Skills

Languages: JavaScript, TypeScript, Java, C++, Python, SQL

Web: React, Next.js, Node.js, Express.js, Tailwind CSS, Prisma ORM, REST APIs, HTML, CSS

Databases: PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, CloudFront), Docker

Tools: Git, GitHub, VS Code, Postman, Linux

Projects

VersionVista – Git Repository Timeline Visualizer — [\[Link\]](#)

React, Node.js, Express, MongoDB, Zustand

- Developed an interactive frontend timeline tool to explore any public GitHub repo's evolution with frame-by-frame commit scrubbing and a VS Code-inspired three-panel UI.
- Engineered a checkpoint-based snapshot system for 10-20x faster state reconstruction via periodic full-snapshots and incremental diff replay.
- Designed modular backend architecture (Route-Controller-Service-Model) with Zustand state management for real-time playback controls (play, pause, seek, 0.5x-4x).
- Created a file tree explorer with diff visualization showing added/modified/deleted files per commit with color-coded annotations.

PayU – Digital Wallet Platform — [\[Link\]](#)

React, Node.js, Express, PostgreSQL, Prisma, JWT

- Built a full-stack digital wallet web application with React 18 + Vite frontend and Express 5 REST API featuring P2P transfers, add-money, and transaction history.
- Implemented ACID-compliant P2P transfers using PostgreSQL Serializable isolation within Prisma transaction to prevent race conditions and double-spending.
- Established layered architecture (Controller-Service-Prisma) with JWT (JSON Web Token) authentication, bcryptjs password hashing, rate limiting, and centralized error handling.
- Modeled monetary data as DECIMAL(18,2) in PostgreSQL with indexed tables and paginated/filtered queries.

MagnetDrop – Decentralized File Sharing App — [\[Link\]](#)

React, WebTorrent, Tailwind CSS

- Built a serverless P2P file-sharing app using WebTorrent for direct browser-to-browser transfers.
- Integrated magnet link generation and real-time progress tracking, supporting files exceeding 1GB.
- Designed a responsive UI with one-click clipboard actions.

Experience

Hans International | [\[Link\]](#)

2024 – Present

Freelance Full-Stack Developer

- Created a full-stack B2B catalog web application with React 18, TypeScript, Express 5, MongoDB, and Tailwind CSS featuring 24+ product listings and categories.
- Developed a JWT-authenticated admin panel (SPA) with full CRUD, drag-and-drop image management via Oracle S3, EmailJS inquiries, and React Query caching.
- Implemented RESTful API with rate-limited admin auth (bcryptjs, httpOnly cookies) and centralized error handling.
- Set up CI/CD pipeline for automated production deployment, ensuring reliable and consistent releases.

Leadership

- Managed INR 80,000+ budget as **Finance Lead** for TGCC, executing 5+ initiatives.
- Increased participation by 60% as **PR & Outreach Senior Executive** via 8+ campaigns.
